

Looking ahead: March equinox 2005 and 06-08 May 2005.

Two time cycles for your astrotrading diary:

20-24 March 2005 = March equinox

06-09 May 2005 - actual cycle - Sunday 08 May 2005

Just a brief comment, about the equinoxes and solstices or seasonal changes we have a great opportunity on the March equinox this year, observing market reactions to multiple events.

From 20032005-23032005, we will see:

2 lunar ingresses

3 planetary ingresses

1 planet stationed to go direct

1 planet stationed to go retrograde.

Markets may be flat during this period, but March equinox 05 will likely be a significant marker, for the start of subsequent moves in many markets.

After that, 06-09 May 2005 will also be worthy of attention - ie ... 45 days on.

In addition to the details above:

23032005 is exactly 5 years from market highs in 2000.

.... and if the astroanalysis above is correct, then we may see an event, like bin Laden being captured, around 08 May 2005 ???

have a great day all

yogi
